Eberspaecher marine heaters: Providing a cozy atmosphere on board with just one click

- **Digital flexibility: Heating control by smartphone and smartwatch**
- **Hydronic S3 Economy: stepless water heating control for optimum thermal comfort**
- **Easy assembly using customer-specific marine installation kits**

Esslingen, 21 September 2017 – For a perfect climate on board even at low temperatures, Eberspaecher presents customized heating systems for boats at METSTRADE 2017 in Amsterdam from 14 to 16 November. This year's highlight at stand 602 in hall 01 is the remote heating control system: Thanks to the EasyStart Web digital operating element, boat owners can use an app on their smartphone and now a smartwatch to conveniently control their heater. With the Hydronic S3 Economy the heating and climate control specialist introduces an efficient pre-heater featuring stepless heating power control onto the market.

If the weather outside is cold and stormy, water sports enthusiasts can look forward to a pre-heated cabin before embarking on a weekend trip or when returning to the boat after a shore excursion. With the **EasyStart Web** digital operating element, you can start and program your pre-heater conveniently using an app on your smartphone or from any other internet-enabled terminal device. The app also allows you to view the interior temperature and operating condition. And the new add-on for the smartwatch, which Eberspaecher is presenting at the trade fair, provides even faster and more mobile digital control. With just a single click, you can turn the heater on and off and check the current interior

temperature. There is also an option to control the heater in the traditional manner, using the EasyStart Timer operating element permanently installed in the boat.

Optimum thermal comfort for boats

With the third generation of the **Hydronic series**, Eberspaecher has developed a powerful water heater featuring stepless heating power control. It not only distributes heat evenly throughout the cabin, but can also be used in combination with a boiler to heat service water. Its robust construction featuring an encased fan motor and separated cold and warm components make it exceptionally durable. If the available power supply on board is limited, the **Airtronic** air heater series is recommended: It scores highly with its ability to heat interior air rapidly and it can easily be installed in a wide variety of boat models. Exceptionally low consumption of fuel and power guarantees long operating times.

Specific marine installation kits for air and water heaters

With its comprehensive product portfolio of marine heaters with heat outputs of 850 to 35,000 watts, Eberspaecher offers tailored products for the most varied customer requirements and numerous different boat types. Specific **marine installation kits** for air and water heaters with a host of practical accessory components enable quick and easy installation on site or in the boat yard.
