

Eberspaecher Saltillo Facility Fact Sheet

Eberspaecher Exhaust Technology, Saltillo, Mexico

Facility Details

- Serves as exhaust technology systems plant in Eberspaecher Division Exhaust Technology
- Home to around 300 employees – expansion to 500 employees until mid-2021 planned
- Serves international car manufacturers for the markets of North America
- Size 21,000 square meters for production area, logistic center and offices
- 18,000 square meters are occupied by production and logistics
- The buildings metallic structure weights about 600 tons. Almost 200 concrete trucks were needed to build the floor in the production area.

Technology and Production

- Produces complete exhaust after-treatment systems for passenger cars and commercial vehicles (Diesel and gasoline) as well as components like catalytic converters, particulate filters and muffler systems
- The exhaust after-treatment systems enable customers to meet the highest emission standards
- Manufactures with state-of-the-art processes like laser shell manufacturing, converter catalyst canning, complex automated welding
- Production of 400,000 exhaust system components at full production level per year
- Automatized manufacturing on-site features 25 automated welding cells and 42 welding robots

Construction Milestones

- Construction start / Ground profiling: September 2019
- Finalization structuring work: January 2020
- Start installation of first production lines: February 2020
- First exhaust system produced and shipped to customer: May 2020
- Production ramp up and full delivery capability: From August 2020
